refer to prediabetes clinic

clinic description

Dayton Children’s prediabetes clinic (formerly known as the hyperinsulinism clinic) focuses on patients who are at risk for developing type 2 diabetes. Our team includes lead physician Dr. Nicholson, a medical assistant and a dietician who work together to provide comprehensive care.

New AAP guidelines for screening obesity in children recommend obtaining fasting metabolic panel, fasting glucose level, liver enzymes, lipid panel and HgA1C.

The prediabetes clinic at Dayton Children’s is now only evaluating children with a BMI above 95%, HgA1C at or above 6% and/or a fasting glucose level at or above 100mg/dl.

Our goal is the early detection and treatment of children who are at risk for developing type 2 diabetes.

referral criteria for prediabetes clinic vs. lipid clinic

lipid clinic referral criteria

- **BMI**
  - above 85%
  - at or below
  - or any BMI with abnormal lipid panel

- **HgA1C**
  - at or below 6.0%

refer to lipid clinic

clinic description

Dayton Children’s lipid clinic provides comprehensive evaluation, education and treatment options for children with lipid disorders and treatment of childhood obesity.

Lipid disorders include things like high cholesterol and high triglycerides. Lipid disorders are frequently associated with insulin resistance syndrome and complications of obesity and elevated BMI. Our team is led by pediatricians and a nurse practitioner with additional training in lipid disorders and obesity in children. The team also includes nurses, dietitians, office staff and medical assistants who are trained in helping patients and their families with obesity concerns.

**refer a patient**

Call 937-641-4000 or visit our website at www.childrensdayton.org/referrals

*Note there is no need to order any additional labs before the scheduled visit. Our clinics will complete the workup.
